Dissecting A Scholarly Article

Follow the steps & write your answers in the spaces below for steps 2-5.

**Step One:** Skim the article to get a basic idea of its structure & content.

**Step Two:** Read the abstract & introduction. Briefly explain the author’s purpose and hypothesis.

**Step Three:** Read about the methods and instrumentation of the study. What type of study was used?

**Step Four:** What were the author’s conclusions based on the study results?

**Step Five:** Were there any limitations or problems with the study? Did the author make suggestions for future research?
